

Vending Solutions Increase Usage Efficiency

OPPORTUNITY

A technology innovation company has a large footprint and staff that use a significant amount of PPE and consumable supplies. Many of the existing point-of-use cabinets in each department were outdated and obsolete, containing items that were rarely, if ever used. Staff would make a long trips to the main storeroom to get items they needed each day.

SOLUTIONS

Using system data, WESCO Integrated Supply proposed an overhaul to the items provided in the point-of-use cabinets. With approval, we pulled items that didn't move and replaced them with items that were frequently disbursed. WESCO vending machines technology was installed in each department. What started as PPE only evolved into additional higher dollar items to provide more value to the site.

SAVINGS SUMMARY

- Reduced 114 hours of walk/wait time by plant maintenance per month
- Realized a 45% reduction of PPE consumption with disbursement limits/controls
- 6.7% reduction in main storeroom transactions
- POU efficiency increased by adding current high-use items
